The peeler re-imagined to sustain quick
and comfortable operation

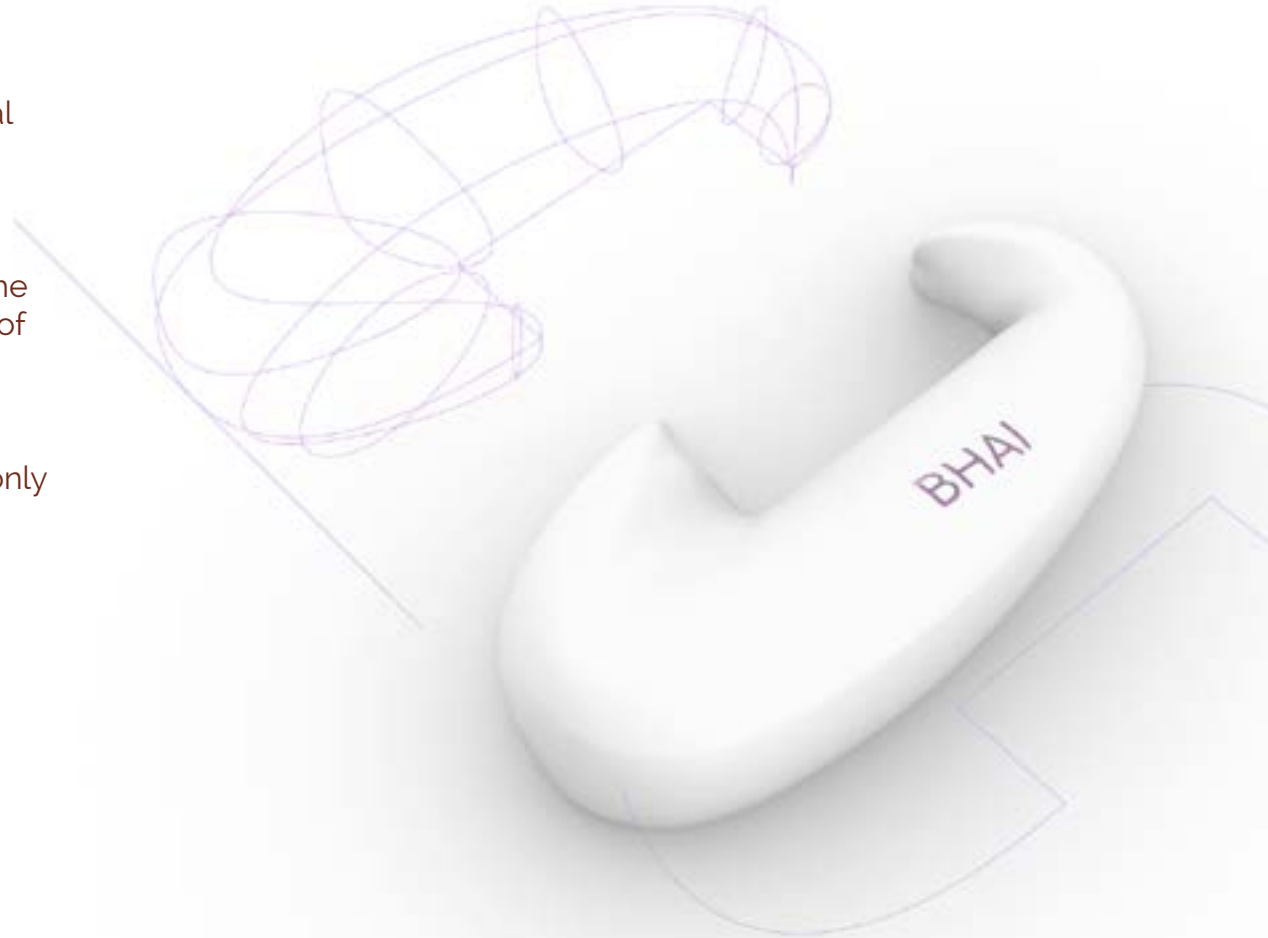

Billy Wu | Helen Zheng | KaiHong Lou
Stoehr | Parsons Product Design | 2019

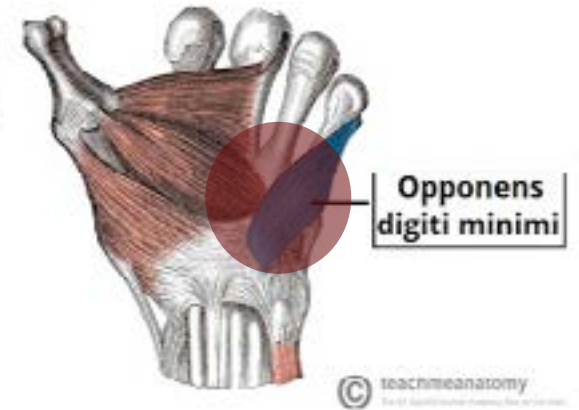

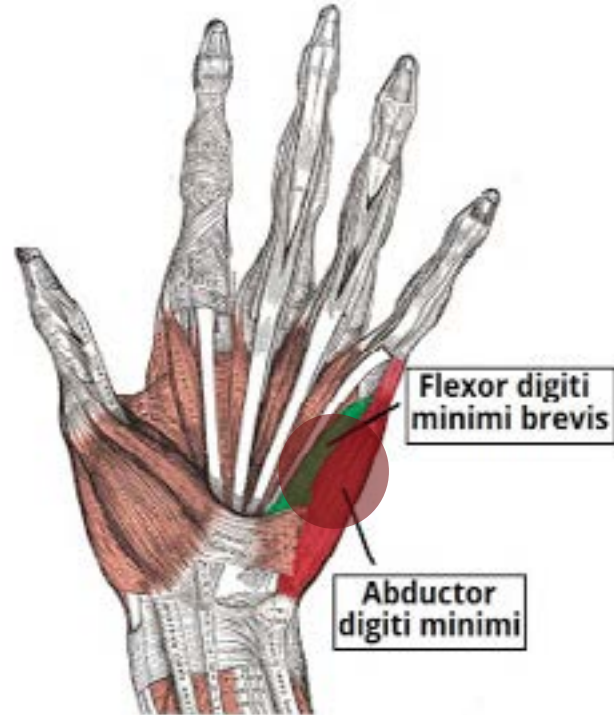

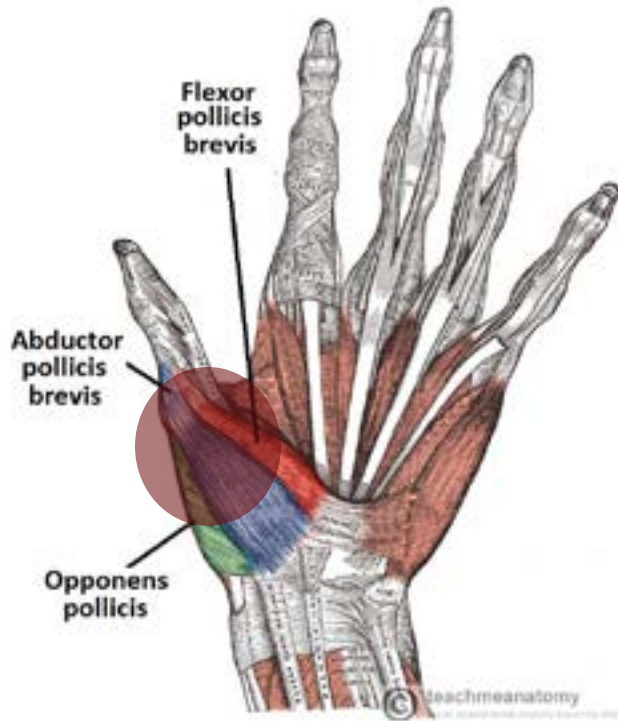

The Problem: Long periods of usage on the original peeler cause stress hand muscles.

Our Solution: Releasing the pressure throughout the overall hand, therefore diminishing the application of pressure in one specific area/motion.

Focus Point: "Design for the weakest link; you are only as strong as your weakest link."
